

SESAR Forum

6 March 2012, 14:00 – 17:00, Room E106

SESAR is Europe's unique and ambitious air traffic management modernisation programme. It will develop the new generation of air traffic management systems Europe needs. The programme unites all air transport actors, reaches out to its international counterparts and helps lowering the environmental impact of aviation. At ATC Global, the SESAR Joint Undertaking presents the progress made so far and gives an outlook to what will happen in 2012.
