

We cordially invite you to the webinar:

## SESAR 2020 ERICA:

### Accommodating existing MALE IFR RPAS in current Class A to C airspace

17 September 2021 10:00-12:00/14:00-16:00

In the context of the European Research Project ERICA (“Enable RPAS Insertion in Controlled Airspace”), funded by the SESAR Joint Undertaking, and aimed at the insertion of Remotely-Piloted Aircraft Systems (RPAS) into Airspace Class A-C, the webinar will focus on IFR RPAS accommodation in these Airspace Classes, in order to share the concept and the initial results of the project with the main stakeholders at European level involved in RPAS operations.

The workshop is aimed at specialists in the areas of RPAS insertion in the Air Traffic, Air Navigation Services and RPAS users. The participation in this workshop will allow specialists to review, contribute and comment on the current proposal for accommodation, and to ensure that their needs will be taken into account in this SESAR solution focussed on the short-medium term.

#### Programme

##### Part ONE 10:00 - 12:00

1. Welcome
2. Introduction to the accommodation concept
3. Use cases of the accommodation concept

##### Part TWO 14:00 - 16:00

4. Details of the concept use cases
5. Open discussion on accommodation
6. Wrap-up and conclusions

Speaker: Cedric D’Silva, Solution #115 Technical Coordinator, Thales Avionics

#### Meeting Registration

Part ONE

Part TWO

Access will be permitted only to those who register their participation. Once registered, you will receive a link via e-mail to attend the event.
