Your safety is our mission.

U-space standards - what we have

ATM/ANS

U-Space

SERA.6005(c)

e-conspicuity
ADS-L

ED-269

ASTM INTERNATIONAL

ASTM F3411-22A
ASTM F3548-21

ADS-L 4 SRD860

(Technical specification to be published Dec. 2022)

U-space standards - what we miss

- Standards supporting the provision of services:
 - Weather Information (DQRS, list of data, accuracy,...)
 - USSPs exchanges (e.g. ensuring unicity of the traffic information)

→ Industry consensus or alternatives

SHEPHERD
PROJECT

→ Enablers for interoperability and U-space vitality:

→ Standardised protocol: CIS ↔  ↔ USSPs

ANNEX II (EU) 2021/664

*Providers of common information services shall ensure that the information [...] is available online through **common open**, secure, scalable, sustainable technologies [...], and that ensure **interoperability** and the **free movement** of U-space services in Union.*

U-space standards - what we will need

- Standards supporting incoming U-space evolution (e.g. higher integration unmanned/manned aircraft):
 - Detect And Avoid capabilities (UAS & ground systems)
 - Enhanced/extended set of services
 - Emergent technologies, e.g. Artificial Intelligence
- Predefined U-space airspace use-cases (scenarios) with harmonized performance requirements to streamline U-space implementation over EU.

Your safety is our mission.
