Real-world results of tackling global environmental challenges: A look at AIRE

The Atlantic Interoperability Initiative to Reduce Emissions (AIRE) agreement between the European Commission and the United States is a programme that aims to improve energy efficiency, and lower engine emissions and aircraft noise. By taking advantage of air traffic management best practices and new technologies, AIRE expects to accelerate the implementation of environmentally friendly procedures for all phases of flight and to validate the benefits of these improvements. AIRE is jointly managed by the Federal Aviation Administration and the SESAR Joint Undertaking. At ATC Global, the FAA and the SJU will reveal the outcome of numerous trials and flight activities during the "Annual AIRE Conference" [AIRE Workshop] on 9 March 2010. Don't miss it!
