Filip Cornelis,
Director Aviation, DG MOVE, European Commission

#SIDS2018
Keynote

Philippe Merlo,
Director ATM, EUROCONTROL

#SIDS2018
SESAR Innovation Days
Salzburg – 4 Dec. 2018

Key role of exploratory research in ATM
Permanent need for ATM exploratory research

- Significant effort to be preserved
- No immediate practical application
- Accept to consider possible dead-ends
- Great potential to shape future of ATM
- Feed innovation pipe-line

- Innovate to meet ATM challenges
Knowledge transfer is key

- Use innovations from other sectors
- Enable Out-of-the-box thinking
- Inspire new researchers with ATM challenges
- From Fundamental to Industrial Research
- Connect Universities with R&D and Industry
- Grow ATM skilled researchers workforce

ENGAGE ATM knowledge network
ATM Challenges today

- Many challenges of different nature:
  - Increasing Airspace capacity
  - Minimizing Aviation environmental footprint
  - Flight efficiency
  - Cost efficiency
  - Training for new generation military jets (J35)
  - Allowing new entrants (drones, balloons, gliders, …)

- Need for new innovative ideas
Data sciences as a key enabler

- Many new promising technologies:
  - Big Data / Data driven techniques
  - Machine Learning
  - Artificial Intelligence

- Well adapted to ATM sector:
  - Massive data bases already available
  - Flight plans, Airspace, Met, Incidents, etc…
  - Rather repetitive activity with lots of variables

- Master ATM complexity
ATM Economics as critical enabler

- Incentivising changes
- Eg: Aviation/Electricity/Telecom
- Performance & Charging regulation as 1st step
- More developments considered:
  - Inclusion of delays, flight efficiency, environment?
  - Different levels of services for ATFM?
  - Network Manager as capacity broker?

- Explore new business models
Thank you for your attention!

Questions?
Keynote

Florian Guillermet,
Executive Director, SESAR JU

#SIDS2018
GROWING COMMUNITY OF SESAR JU STAKEHOLDERS & BENEFICIARIES

26 EU Member States participating

SESAR 2020 projects: blended academic & industrial expertise

Types of beneficiaries (Sept. 2018)

- Higher Education: 8%
- Research: 8%
- Public: 17%
- Private companies: 6%
- SMEs: 6%

26 EU Member States participating

EU Member States with SESAR 2020 funding

Third-countries with SESAR 2020 funding (also incl. Israel, Australia, United States, Canada...)

SESAR INNOVATION DAYS 2018 | 3-6 December 2018, Salzburg
DELIVERING TIMELY SOLUTIONS:
SMART, GREEN, INTEGRATED

- 63 SESAR Solutions
- 40+ already under deployment across Europe
- Disseminated through EU aviation standards
- Clear associated benefits and deployment timeline
SESAR 2020 EXPLORATORY RESEARCH CALLS

**H2020 open calls**: not limited to SJU Members

- **ER-1 (€20.6)**
  ATM excellent science & outreach and ATM applications oriented research

- **ER-2 (€9M)**
  Remotely-piloted aircraft systems (RPAS) in very low-level (VLL) drone operations

- **ER-3 (€10M)**
  Transversal activities, including knowledge transfer networks (KTN) and ATM applications oriented topics

- **ER-4 (€38+M)**
  ATM excellent science & outreach and ATM applications oriented research

#SIDS2018
Overview

• 28 ER1-projects, from 2016-2018
• 80 academic and industry partners from European Union and EU Associated Countries (Switzerland, Norway, Iceland, Serbia, Israel, Turkey).

ATM excellence & outreach

• Automation, robotics and autonomy
• Complexity, data science and information management
• Environment and meteorology for ATM
• Economics, legal and regulation

ATM application-oriented research

• High-performing airport operations
• Advanced air traffic services
• Enabling aviation infrastructure
• ATM operations, architecture, performance and validation
GROWING RECOGNITION FOR EXPLORATORY RESEARCH RESULTS
SJU SCIENTIFIC COMMITTEE

• SJU Scientific Committee has been working hard
• Progressing thinking on key issues
• Supporting SESAR policy and guidance
• A number of focus areas addressed by small Task Forces
• Dedicated Innovation Pipeline Task Force to help streamline the innovation pipeline
• Helping us define the future
Engage KTN
Thematic challenges update; SIDs look ahead

Andrew Cook, Paula López, Tatjana Bolić, Dirk Schaefer

8th SESAR Innovation Days
Salzburg, 03-07 December 2018
Overview

• Introduction to Engage
  • four thematic challenges
• Teaser slides on each challenge
  • know who to come and talk to
• Next steps for the challenges
  • funding opportunities and support
• Look ahead
  • more from Engage coming up
  • SESAR Innovation Days programme
Introduction to Engage
the SESAR Knowledge Transfer Network
Industry partners

Advanced Logistics Group (ALG)
AGIFORS - Airlite Group of the International Federation of Operational Research Societies
Air Traffic Controllers European Unions Coordination (ATCERC)
Air Baltic
Airport Regions Conference (ARC)
American Airlines
Aéro CR
Aslog
Association for the Scientific Development of ATM in Europe (ASDA)
Autorità di Aviazione Civile (ANAC)
Barcelona Supercomputing Center (BSC)
Belcontrol
Boeing Research and Technology Europe (BRET-Europe)
Bundesamt für Flugsicherung (BAF)
Civil Aviation Authority (CAA)
COCPANS Consortium
Department for Transport (UK)
Direction des Services de la Navigation Aérienne (DSNA)
Direttorio Operativo Nazionale (DOV)
European Meteorological Services Network (EUMETSAT)
European Passenger's Federation (EPF)
Executive Airlines
Ferronova Agromar
Flyair
FlightGlobal
Flughafen München / Munich Airport
Gitea SL
HELOL
HENA-V - High Endurance Multipurpose Aerial Vehicles
Honeywell Aerospace
HungaroControl
Icelandair
IFSTTAR - Institut Français des Sciences et Technologies des Transports, de l'Aménagement et des Réseaux
INFORNAV - Institut für Operations Research and Management GmbH
International Air Transport Association (IATA)
International Federation of Air Traffic Controllers' Associations (FIATCA)
Irish Aviation Authority (IAA)
LVF - Luftfahrtverband
London Luton Airport
Lufthansa Systems
Manchester Airport
NATS
Navaer
Network Manager - nominated by the European Commission
NEXTOR II Consortium - University of California, Berkeley and University of Maryland

Pegasus Airlines
QinetiQ Ltd
Raytheon UK
Sabre Airlite Solutions
SAS - Swiss International Air Lines
Thomas Cook Airlines
TUBITAK - The Scientific and Technological Research Council of Turkey
Turkish Airlines
Introduction to Engage
Key features and objectives (2018-2021)

- Better integrate more applied/industrial & exploratory research (two-way process)
  - mutual benefit, integrated into the fabric, funded; interdisciplinary
- Education and training: future ATM skilled workforce
  - “develop new talent with a deep knowledge of the future ATM scientific research needs ... stimulating the next generation of ATM staff”
  - PhD and post-graduate thesis Call
  - 3 summer schools; ATC training courses; lecture progs
  - SESAR Innovation Days
- Knowledge hub (wiki) as a ‘go-to’ source, single point of entry for ATM knowledge
  - popular demand: improved search functionality; consolidated repository
- Not only larger concepts, but sum of large number of support actions
  - multiple grants; ‘light touch’
Engage Thematic Challenges

At the core of the KTN is the definition of various thematic challenges: new ideas suggested by the research community, not already included within the scope of an existing SESAR project. They are developed along with the ATM concepts roadmap and complementarily with some of the network’s PhDs and theses.
Thematic challenges and workshops

Call for catalyst fund proposals open until **15 February 2019** (more later); consortium **ineligible**
Thematic challenges and workshops
Workshop planning and dissemination

• **Objectives**
  • mature the state of the art for each challenge (short- and longer-term)
  • identify barriers and possible solutions
  • provide opportunity for proponents to further develop ideas
  • inform the final stages of the SESAR ER4 Call

• **Workshop design**
  • brief presentations summarising state of the art
  • invited industry and interdisciplinary experts
  • extended, in-depth discussions (facilitated, break-outs)

• **Dissemination**
  • SESAR e-news, Engage website, other networks, targeted campaigns, etc.
  • SJU, ANSPs, airlines, EUROCONTROL, PRU, NM, associations, academia (incl. interdisciplinary fields), SMEs
The thematic challenges and workshops

Workshop discussion sessions

- Invited the participants to suggest:
  - what specific follow-up research is likely to be useful to mature the state of the art (incl. flagging what may be addressed by catalyst funding)
  - what measures of success could be used to assess progress of challenge:
    - **short-term**: wholly within catalyst-funded project
    - **longer-term**: outside/beyond such a project (could be identified within it)
  - what are likely barriers to prevent progress towards maturing challenge – how might we overcome them?

- **listening mode**: to refine (dynamic) challenge texts, maintained on the Engage website
Teaser slides on each challenge
Teaser slides on each challenge
Know who to come and talk to

#1. CNS vulnerability and security

Dirk Schaefer
EUROCONTROL

#3. Efficient use of MET data
Tatjana Bolić
University of Trieste

#4. Novel market mechanisms in ATM
Andrew Cook
University of Westminster
CNS vulnerability and security

Paula López
CNS vulnerability and security

Abstract (1/2)

CNS/ATM components (e.g., ADS-B, SWIM, datalink, Asterix) of the current and future air transport system present vulnerabilities that could be used to perform an ‘attack’.

Further investigations are necessary to mitigate these vulnerabilities, moving towards a cyber-resilient system, fully characterising ATM data, its confidentiality, integrity and availability requirements.

A better understanding of the safety-security trade-off is required.
Additional security assessments for legacy systems are also needed to identify possible mitigating controls in order to improve cyber-resilience without having to replace and refit.

Future systems security by design is essential: a new generation of systems architectures and applications should be explored to ensure confidentiality, cyber-resilience, fault tolerance, scalability, efficiency, flexibility and trust among data owners.

Collaborative, security-related information exchange is essential to all actors in aviation. This is specially challenging in a multi-stakeholder, multi-system environment such as ATM, where confidentiality and trust are key.
CNS vulnerability and security
Workshop planning (Spring 2019, SJU, Belgium)

• Facilitate discussion among aviation stakeholders (airlines, ANSPs, airports...) regarding systems security challenges
• Foster a multidisciplinary community of researchers to enhance the transferability of knowledge from other disciplines (e.g. IT security) into ATM
• Open a debate on the trade-off between the opportunities and risks of data sharing among aviation stakeholders
• Identify the potential ATM systems vulnerabilities and the measures that should be further investigated to mitigate such risks
• Propose ideas on how to perform an initial security assessment and detect security threats in current and future ATM
• Create awareness of the on-going initiatives in the CNS/ATM systems security field
• Discuss common ideas on how to model emerging security problems
CNS vulnerability and security

Example ideas for potential exploration

• Assessing the security of ATM elements and relationships to identify vulnerabilities and ensure protection against global threats
• Enhancing cybersecurity of systems without having to replace and refit, including certification, legal and liability issues
• Building data-sharing architectures capable of connecting and providing access to distributed data while preserving privacy

• Adapting mental models to prepare operators to understand and manage cyber threats
• Updating software and firmware of IT components to resolve security vulnerabilities of critical infrastructures
• Further researching security analyses of aviation-specific protocol implementations (vulnerabilities, trust, software libraries)
Data-driven trajectory prediction
Dirk Schaefer
Data-driven trajectory prediction
Abstract (1/2)

Accurate and reliable trajectory prediction (TP) is a fundamental requirement to support trajectory-based operations.

Lack of advance information and the mismatch between planned and flown trajectories caused by operational uncertainties from airports, ATC interventions, and ‘hidden’ flight plan data (e.g., cost indexes, take-off weights) are important shortcomings of the present state of the art.

New TP approaches, merging and analysing different sources of flight-relevant information, are expected to increase TP robustness and support a seamless transition between tools supporting ATFCM across the planning phases.
Data-driven trajectory prediction
Abstract (2/2)

The exploitation of historical data by means of machine learning, statistical signal processing and causal models could boost TP performance and enhance the TBO paradigm.

Specific research domains include machine-learning techniques, the aggregation of probabilistic predictions, and the development of tools for the identification of flow-management ‘hotspots’.

These could be integrated into network and trajectory planning tools, leading to enhanced TP.
Data-driven trajectory prediction

Example ideas for potential exploration

• Trajectory predictors supporting airborne self-separation: definition of requirements (accuracy, robustness, run time) & concept development of enabling technologies and capabilities
• Improved matching of capacity to demand: enhanced TPs integrating uncertainty assessment, robust planning and cost-efficiency assessment allowing better demand assessment at network level – and better capacity planning
• Data-driven approaches for understanding and prediction of AU preferences and behaviours enabling improved NM operations and flexibility-predictability trade-off
• Collaborative multi-sector CD&R: requirements definition and concept development of data-driven TP in support of CD&R involving various sectors
• Optimising and integrating local planning activities to assess, contain and communicate their network effects
• Improving data-sharing and data access to satisfy AU, NM and ANSP technical and organisational requirements and expectations: data format and availability, incentives for data sharing, confidentiality issues
Efficient use of MET data

Tatjana Bolić
The main objective of this challenge is to improve overall ATM system performance by providing better user-support tools based on improved meteorological (‘MET’) products.

The focus is on the synergy of several methods and techniques in order to better meet the needs of operational users and to support aviation safety (e.g., through creating early warning systems) and regulation-makers (e.g., moving from text-based to graphical information provision).
Efficient use of MET data
Abstract (2/2)

All stakeholders may benefit from this synergy: ANSPs (e.g., sector reconfiguration and separation provision), airlines (e.g., storm avoidance), airport operators (e.g., airport management under disruptive events), and the Network Manager (e.g., demand-capacity balancing).

The challenge is, therefore, to bring the following perspectives closer: (a) for meteorological/atmospheric science, the development of products tailored to ATM stakeholders’ needs, which are unambiguous and easy to interpret; (b) for stakeholders, the identification of the most suitable information available and its integration into planning and decision-making processes.
Efficient use of MET data
Workshop overview (13 November, SJU, Belgium)

• Goal of enhanced situational awareness (re. MET conditions) for ATM stakeholders
• Consistent and agreed European weather ‘picture’ does not exist yet

• Trend in MET products is towards ensembles, which calls for education of ATM stakeholders re. interpretation of results

• MET products can be classified by two dimensions:
  ▪ spatial resolution - global, limited area and high-resolution
  ▪ time resolution - long, medium, short and very short range

• Often research funding and fragmentation of MET provision present a barrier to holistic European progress

• User trust and reliability, plus sensitivity of operational processes, cited as barriers
• Long-term effort in both communications and research needed
Efficient use of MET data

**Example ideas for potential exploration**

- Very high-resolution, very short-range forecasts using numerical weather prediction models & observational data assimilation
- Quantifying the sensitivity of operational processes to MET uncertainty, comparing these with other sources of uncertainty
- Incorporation of ensemble weather information into decision-support tools, adapted for different ATM stakeholders
- Accurate prediction of weather conditions (e.g. visibility, glide-path wind) influencing airport arrival and departure operations
- Consolidation of climate risk assessment methodologies for airports
- Creating a climate forecast ‘baseline’ for aviation from the IPCC UN panel report
Novel market mechanisms in ATM
Andrew Cook
This research explores the design of new allocation markets in ATM, taking into account real stakeholder behaviours. It focuses on designs such as auctions and ‘smart’ contracts for slot and trajectory allocations.

It seeks to better predict the actual behaviour of stakeholders, compared with behaviours predicted by normative models, taking into account that decisions are often made in the context of uncertainty.
Novel market mechanisms in ATM
Abstract (2/2)

Which mechanisms are more robust against behavioural biases and likely to reach stable and efficient solutions, equitably building on existing SESAR practices? The research will address better modelling and measurement of these effects in ATM, taking account of ‘irrational’ agents such as airline ‘cultures’.

A key objective is to contribute to the development of improved tools to better manage the allocation of resources such as slots and trajectories, and incentivising behaviour that benefits the network - for example by investigating the potential of centralised markets and ‘smart’ contract enablers.
Novel market mechanisms in ATM
Workshop overview (25 October 2018, UoW, UK)

- New market designs for allocation & trading of tactical slots may support potential future mechanisms for slot swapping & trading between AUs
- Potential beyond FPFS: matching market, centralised batch auctions, primary & secondary markets (double auction or bilateral exchanges)

- Need to consider trade-offs between: individual rationality, budget balance, allocative efficiency and incentive compatibility in design of new mechanisms
- Need to model more realistic human interactions in a multi-stakeholder, complex socio-technical environment, c.f. highly constrained/limited simulation environments

- Most current models are normative, making assumptions about agent rationality: do not always work as predictors
- Behavioural science in general, and behavioural economics in particular, may bring complementary solutions

NB. Strategic airport slots are not in scope for this challenge
Novel market mechanisms in ATM

Example ideas for potential exploration

• Incorporating behavioural science methods into improved traffic demand & distribution predictor tools for ANSPs & UDPP
• Assessing if incentives or penalties work as better drivers of behaviour: whether social norms can be used to improve collaboration
• Predicting and avoiding undesirable behaviour, such as gaming, in ATM allocation mechanisms

• Building a better understanding of ‘equity’ and ‘fairness’, plus trade-offs across different stakeholders, and with ‘flexibility’
• Improving the assessment of uncertainty and disturbance, and of new mechanism implications for policy recommendations
• Running models and tools in shadow-mode, with practical user interfaces and value in output metrics (e.g. costs, overloads)
Next steps for the challenges

Thematic challenge 3 – Efficient provision and use of meteorological information in ATM

**Workshop:** 13 November 2018, SESAR Joint Undertaking (SJU), Brussels, Belgium – Atmospheric scientists and ATM stakeholders shaping a more efficient provision and use of meteorological information in future aviation.

**Final programme here. Presentations:** [zip file1 (10MB); zip file2 (13MB)].

The main objective of this challenge is to improve overall ATM system performance by providing better user-support tools based on improved meteorological (‘met’) products. The focus is on the synergy of several methods and techniques in order to better meet the needs of operational users and to support aviation safety (e.g., through creating early warning systems) and regulation-makers (e.g., moving from text-based to graphical information provision). All stakeholders may benefit from this synergy: ANSPs (e.g., sector reconfiguration and separation provision), airlines (e.g., storm avoidance), airport operators (e.g., airport management under disruptive events), and the Network Manager (e.g., demand-capacity balancing). The challenge is, therefore, to bring the following perspectives closer: (a) for meteorological/atmospheric science, the development of products tailored to ATM stakeholders’ needs, which are unambiguous and easy to interpret; (b) for stakeholders, the identification of the most suitable information available and its integration into planning and decision-making processes.

engagekttn.com
Next steps for the challenges
Call for catalyst fund proposals

• Call open until 15 February 2019
  • maturing from exploratory to applied-orientation
  • up to €60k, 12 months, ‘light touch’ (also ‘open’)
  • during and post evaluation, how we can support development ...
Next steps for the challenges
Support from consortium and partners

Monitoring thematic challenge (and PhD / post-graduate thesis) proposals, where we:

• can add value and technical support
• coordinate with industry partners (e.g. expertise and data)
• seek interdisciplinary / expert advice
  • specific (e.g. student)
  • generic (e.g. summer school)

(More on wider picture, later)
Next steps for the challenges
Support from EUROCONTROL

• Specific effort for supporting Engage (challenges, PhDs, etc.); + two initiatives open to all:

  • **ESCAPE-Light**
    - trial of real-time, open-source ATC simulator
    - controller & pseudo-pilot positions; runs on Linux
    - rich ATC data (e.g. voice, inputs, tracks)
    - can run own algorithms (e.g. ML) & data analytics
    - free software; users can build / propose improvements

  More info: philippe.debels@eurocontrol.int and https://simulations.eurocontrol.int/

• **Data accessibility**
  - historical PRISME (DDR) data: improved access for research purposes
  - easier access to data over 2 years old
  - four months per year (March, June, September, December)
  - beta download site expected soon
  - will be notified on Engage, EUROCONTROL and ART websites
Look ahead
More from Engage coming up
Look ahead
More from Engage coming up

• Brief thematic challenges recap; 2019-2020

• PhD / post-graduate theses Call

• Summer schools; student support

NETWORKING DINNER
Wednesday, 5 December 2018

Hangar 7 Museum
Wilhelm-Spazier-Straße 7a, 5020 Salzburg

Please note that there will be participant fee of 35 EUR to be paid in advance on-site during the main event.

Buses to the Hangar 7 museum will depart at 18:30 from outside the Salzburg Congress Centre

Airline Disruption Management with Aircraft Swapping and Reinforcement Learning
Gabriel Hondet, ENAC

Free Route Airspaces in Functional Air Space Blocks
Judith Rosenow, TU Dresden

Application of Machine Learning for ATM Performance Assessment – Identification of Sources of En-Route Flight Inefficiency
Rodrigo Marcos, Nomnom

Tactical Prediction of the Number of Control Positions with Softmax Regression and Tree Search
Judicaël Bedouet, ONERA

Detecting Controllers' Actions in Past Mode-S Data by Autoencoder-Based Anomaly Detection
Xavier Olive, ONERA

The Effects of the Introduction of Free Route in the Hungarian Airspace
Fanni Kling, HungaroControl

(LOCATION: Karajan Hall) (LOCATION: Wolf-Dietrich Hall)

SITE VISITS

• **TOUR 1: Salzburg Area** (Salzburg University, Salzburg Airport, Hangar 8, Austrian Airforce)

• **TOUR 2: Vienna** (Frequentis, University of Vienna)

• **TOUR 3: Vienna** (Austrian Airlines, Austrocontrol)

(You must be pre-registered to attend these tours, please speak to someone at the SIDS registration desk should you wish to attend)
Engage KTN
Thematic challenges update; SIDs look ahead

Thank you
